DETAILED ACTION

1. This office action is in response to amendment filed 09/20/2005.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Benoit Castel, on 10/24/2005.

In claim 10, line 1, replace "9" with --1 --.

Allowable Subject Matter

2. Claims 1-8, 10-13 are allowed.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

The primary reason for allowance of the claims is the inclusion of at least one input connector capable of receiving a sensor and at least one analogue-to-digital converter comprising

differential inputs, reference input supplied with a voltage taken at the terminals of said reference impedance and a conversion input supplied with a voltage taken via the input connector at the sensor terminals and means for delivering an image of the physical parameter measured by the sensor.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Zitelli (US 4,016,557) discloses data acquisition system comprising transducers T1,T2... Tn providing input to gain differential amplifier 50 whose output is received by analog to digital converter 19 and coupled to digital computer (Fig. 5).

Yoshida (US 20050200510 A1) discloses analog to digital converter circuit configured by differential circuits, respectively, so that differential input analog signals are converted into digital values (see claims 7 and 8).

Morimoto (US 6,369,584 B1) discloses analog to digital converter 60 receiving switched input signal from current sensor 10 and a reference input supplied with a voltage taken at the terminal of reference impedance 30 (Fig. 3).

Andoh et al. (US 5,877,718) discloses analog-to-digital converter comprising differential input with reference input supplied with a voltage taken at the terminal of reference impedance R (Fig. 5).

Perkins et al. (US 5,152,482) discloses data acquisition system comprising analog-to-digital converter receiving differential inputs via conventional connector J3 FIG. 13.

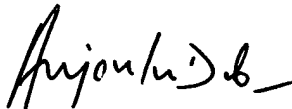

None of the above prior art references disclose the combination as claimed including at least one input connector capable of receiving a sensor and an analogue-to-digital converter comprising differential inputs, reference input supplied with a voltage taken at the terminals of said reference impedance and a conversion input supplied with a voltage taken via the input connector at the sensor terminals and means for delivering an image of the physical parameter measured by the sensor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
